The EN2130 Series Control is a microprocessor based resistance welding control. This control is equipped with dual schedule, dual heat, with positive or negative $\frac{1}{2}$ cycle feature.

Initiation of two different weld schedules (Squeeze, Weld, Hold, and Percent of Current) are available on separate initiation inputs.

- Store 2 UNIQUE SCHEDULES
Both schedules retained in memory with power off
- Allows a choice of either Positive or Negative $\frac{1}{2}$ cycle firing
- Single valve output circuitry
- Control can be INTERFACED with external Programmable Logic Control (PLC)
