1.1 Features

FEATURES:

- Constant current regulation; Primary / Secondary feedback
- Current monitoring with high, low, and pre-limits
- Up to 64 programs (internal or 16 external selection)
- On Timer Membrane Keyboard with backlit 128x64 (8 lines) LCD graphic display
- Six (6) inputs and four (4) outputs with output protection on CPU
- Electrode management functions, including stepping, tip-dressing and preset curves
- Welding programs may be linked together for complex spot schedules (chained or successive)
- Refresh firmware through USB device
- Load/export control settings from/to USB device
- AC 60/50 Hz welding supported
- Spot / Pulsation / Seam welding / Flash or Butt welding / Brazing
- Multiple weld intervals plus pulsation, upslope and downslope
- Air-over-oil gun operation
- Retraction – maintained, and momentary
- Water Saver (contactor timer)

OPTIONS:

- Program Lockout (key switch)
- Operation Mode Switch (Program Lockout and Weld/No Weld)
- Error Reset Switch
- Optional plug-in Ethernet card provides PLC compatibility via MODBUS and Ethernet/IP for remote I/O
- AC Valve outputs

SCHEDULE PARAMETERS:

- Schedule Number: 0 to **63**
- Squeeze Delay: 0 to 99 cycles
- Squeeze: 0 to 99 cycles
- Valve Mode: None / All combinations of 3 valves
- Weld1: 0 to 99 cycles
- Weld1: Phase Shift / Constant Current
- **Heat1**: 0 to **99%**
- **Current1**: 0 to **100.00 kA**
- **Cool1**: 0 to **99 cycles**
- Slope: 0 to 99 cycles
- Weld2: 0 to 99 cycles
- Weld2: Phase Shift / Constant Current
- **Heat2**: 0 to **99%**
- **Current2**: 0 to **100.00 kA**
- **Cool2**: 0 to **99 cycles**
- **Hold**: 0 to **99 cycles**
- Off: 0 to 99 cycles
- Impulses: 1 to 99 cycles
- Heat/Current Offset: -15 to +15%
- Cycle Mode: Non-repeat / Repeat / Chained / Successive / Wait-here
1.2 Reference Documents

A QR code is located on the EN6001 control. This code will link to a landing page on ENTRON’s website containing useful technical documents, including a copy of this manual.

NOTE: ENTRON’s landing page should not require that you input any personal information or passwords in order to access the documents; scanning the code should directly link to the files. If personal information is asked for, close the site immediately and alert ENTRON, as this might indicate the code has been tampered with.

Some examples of free QR code scanning apps:

- Qrafter (iPhone)
- Kaspersky QR Code Scanner (Android)
- i-nigma (both)
1.2 Reference Documents

ADDITIONAL REFERENCES:

Please see www.entroncontrols.com for additional references.
1.3 Specifications

**Protection Type:**
NEMA 1 and NEMA 12 Enclosure

**CPU operating voltage (without I/O):**
24 VDC ±5% with maximum ±2% ripple at 220 mA

**Rated current (without I/O) at 24V:**
- approximately 500 mA - SV1 - SV3
- approximately 500 mA - PO1 - PO4

**Environmental Conditions:**
- **Operation:** 0°C to 60°C
- **Storage/Transport:** -25°C to 70°C
- **Air pressure:** 0 to 2000m above sea level
- **Humidity:** no dew point excursion allowed

**Number of Schedules:**
64

**Discrete I/O:**
- **Inputs:**
  - logic ‘1’: +24V ±15% at 10 mA
  - logic ‘0’: 0 to +2V or open
- **Outputs:**
  - 24VDC maximum 0.5A with short circuit protection
  - Optional: valve output fail safe relays per AWS J1.1:2013
    - 24 - 120VAC maximum 1A
  - NW1: 24VDC at 300 mA during weld

**Power Supply:**
24VDC ±5% with maximum ±2% ripple at 3.2A

**Optional AC Valve Power Supply:**
120 VAC 100 VA

**Programming:**
Front Panel or Ethernet

**Operating system:**
In Flash Memory; reloadable from USB flash drive

**Program memory:**
RAM memory

**Operating voltage:**
240, 380, 480, 575 VAC ±10%

**Cooling Water:**
________________________________________
________________________________________
ENTRON Controls follows the practices of the RWMA for precautionary labeling. See RWMA Bulletins #1 and #5 for a complete description. Observe the WARNING, DANGER, and CAUTION labels affixed to control to maintain safe operation. ENTRON Controls, LLC. and its affiliates are not responsible for any harm caused by non-compliance of instructions associated with the aforementioned labels or signal words to follow.

The signal word **DANGER** is used to call attention to immediate or imminent hazards which if not avoided will result in immediate, serious, or personal injury or loss of life. Examples are: exposed high voltage; exposed fan blades.

The signal word **WARNING** is used to call attention to potential hazards which could result in personal injury or loss of life. Examples are: not using proper personal protection; removal of guards.

The signal word **CAUTION** is used to call attention to hazards which could result in non-life threatening personal injury or damage to equipment. **CAUTION** may also be used to alert against unsafe practices.

The term **NOTICE** is used for making recommendations on use, supplementary information, or helpful suggestions. Non-compliance with these recommendations may result in damage to control, welding machine, or workpiece. ENTRON Controls, LLC. and its affiliates are not responsible for damage caused by such non-compliance, and warranties may be voided accordingly at the discretion of ENTRON Controls.

**WARNING:** Individuals with cardiac devices should maintain a safe distance due to strong magnetic fields arising from resistance welding. The function of cardiac pacemakers and defibrillators may be disturbed, which may cause death or considerable health damages to persons concerned! These persons should avoid the welding system unless authorized by a licensed physician.
2.0 Safety

Adhere to all of the cautions, warnings, and danger alerts on the labels located within the control as well as this document.
3.1 Install and Setup

For wall-mount dimensions, refer to the ENTRON Cabinet Guide (doc 780054) on our website.

1. Ensure that all power is removed before connecting the control.

2. Connect the chassis ground to an external earth ground.

3. Connect L1, L2, and H1 as shown in the “CUSTOMER CONNECTIONS” section of the wiring diagram. An H1 connection will be required for each transformer in a multiple-control layout.

4. Using the wiring diagram, verify the T1 jumper connection properly corresponds with the L1/L2 line voltage.

5. Ensure that all electrical and mechanical connections are tightly secured.

6. Connect cooling water as required.

7. Connect any necessary foot switches, valves, E-Stop switches, pressure switches, etc.

8. Program a test-schedule with the following parameters below:

<table>
<thead>
<tr>
<th>PARAMETER</th>
<th>SETTING</th>
</tr>
</thead>
<tbody>
<tr>
<td>Squeeze Delay</td>
<td>0 cycles</td>
</tr>
<tr>
<td>Squeeze</td>
<td>60 cycles</td>
</tr>
<tr>
<td>Weld 1</td>
<td>0 cycles</td>
</tr>
<tr>
<td>Cool 1</td>
<td>0 cycles</td>
</tr>
<tr>
<td>Slope</td>
<td>0 cycles</td>
</tr>
<tr>
<td>Weld 2</td>
<td>8 cycles</td>
</tr>
<tr>
<td>&gt;Mode</td>
<td>Phase Shift</td>
</tr>
<tr>
<td>&gt;Heat</td>
<td>25 %</td>
</tr>
<tr>
<td>Cool 2</td>
<td>0 cycles</td>
</tr>
<tr>
<td>Hold</td>
<td>60 cycles</td>
</tr>
<tr>
<td>Off</td>
<td>0 cycles</td>
</tr>
<tr>
<td>Impulses</td>
<td>0 cycle</td>
</tr>
</tbody>
</table>

9. Run the test-schedule with the control in “No Weld” mode. Proper sequencing can be verified by monitoring the status page. *Note: The display refresh time is 500ms; therefore any sequences less than 30 cycles (60Hz) or 25 cycles (50 Hz) might not be displayed.

10. Once proper sequencing is verified, adjust timing cycles, inputs, and outputs as necessary.

4.2 Discrete I/O

Timer Inputs (P1)

[FSC] Foot Switch Common (P1-1 or P1-12)
Input Common connection (foot switch common) - serves as common point for FS1, FS2, ES1, NW1, and PI1 - PI6. Internally connected to 24VDC.

[FS1] Foot Switch #1 (P1-2)
Used as a start/initiation input for weld sequences. When connected to FSC, it will be active and draw 10 mA. May be used alone as Single Stage Foot Switch or Stage 1 of a 2-Stage Foot Switch. Activates Internal Control Relay 1 (CR1). For more information on using a Two Stage operation, see Section 5.4. Do not use solid state control devices; only use dry switch contacts without snubbers.

[FS2] Foot Switch #2 (P1-3)
Used as a start/initiation input for weld sequences. When connected to FSC, it will be active and draw 10 mA. May be used alone as a Single Stage Foot Switch or Stage 1 of a 2-Stage Foot Switch. Activates Internal Control Relay 1 (CR1). For more information on using a Two Stage operation, see Section 5.4. Do not use solid state control devices; only use dry switch contacts without snubbers.

[ES1] Emergency Stop (P1-4)
When open, the control stops any and all processes (all valves and firing pulses turn off). While in Emergency Stop condition, Status Page 1 will display Error Code 09 until the condition has been cleared. If the execution of a schedule was interrupted by means of this switch, the control will not reinitiate automatically (after the Emergency Stop condition is removed). Upon release of this switch, it must be re-initiated by closing the pilot switch.

[NW1] No Weld Signal (P1-5)
External Weld/No Weld input. Close for Weld; open for No Weld. When active, it will draw 10 mA. When welding, it will draw 300 mA. When open, no source voltage is provided to the weld firing circuit.

[PI1] Programmable Input #1 (P1-6)
Use as a multi-purpose programmable input. Via programming, it may be used as Temperature Limit Switch (TT1 or TLS), 2nd Stage, Back Step, or Part Counter Reset (PCTR) input. See Section 5.4 for more information. When connected to FSC, it will be active and draw 10 mA.

[PI2] Programmable Input #2 (P1-7)
Used as a multi-purpose programmable input. Via programming, it may be used as Edit Lock, Pressure Switch (PS1), Interlock, or Weld Counter Reset (WCTR) input. See Section 5.4 for more information. When connected to FSC, it will be active and draw 10 mA.

[PI3] Programmable Input #3 (P1-8)
Used as a multi-purpose programmable input. Via programming, it may be used as Error Reset, Sch. Select 1, Stepper Reset, or 2nd Stage input. See Section 5.4 for more information. When connected to FSC, it will be active and draw 10 mA.
4.2 Discrete I/O

[PI4] Programmable Input #4 (P1-9)
    Used as a multi-purpose programmable input. Via programming, it may be used as Interlock, Sch. Select 2, or Error Reset input. See Section 5.4 for more information. When connected to FSC, it will be active and draw 10 mA.

[PI5] Programmable Input #5 (P1-10)
    Used as a multi-purpose programmable input. Via programming, it may be used as Back Step, Sch. Select 4, or Retraction input. See Section 5.4 for more information. When connected to FSC, it will be active and draw 10 mA.

[PI6] Programmable Input #6 (P1-11)
    Used as a multi-purpose programmable input. Via programming, it may be used as Stepper Reset, Sch. Select 8, Edit Lock, or Escape input. See Section 5.4 for more information. When connected to FSC, it will be active and draw 10 mA.

I/O information continues on the next page.
4.2 Discrete I/O

Timer Outputs (P2)

[SVC] Solenoid Valve Common (P2-1)
24VDC negative return connection (solenoid valve common) - serves as common point for SV1, SV2, SV3, and PO1 - PO4. Also internally connected to 0VDC.

[SV1] Solenoid Valve #1 (P2-2)
24VDC output rated at 0.5 A maximum. Used for weld air valve 1. Supplies 24 VDC when active. Connect the other side of the load to SVC. Protected by Internal Control Relay 1 (CR1).

[SV2] Solenoid Valve #2 (P2-3)
24VDC output rated at 0.5 A maximum. Used for weld air valve 2. Supplies 24 VDC when active. Connect the other side of the load to SVC. Protected by Internal Control Relay 1 (CR1).

[SV3] Solenoid Valve #3 (P2-4)
24 VDC output rated at 0.5 A maximum. Used for weld air valve 3. Supplies 24 VDC when active. Connect the other side of the load to SVC. Protected by Internal Control Relay 1 (CR1).

[PO1] Programmable Output #1 (P2-5)
24VDC output rated at 0.5 A maximum. Via programming, it can be used for Any Error, Retraction, Force Error, or Major Error output. See Section 5.4 for more information. Not isolated via Internal Control Relay (CR1). Supplies 24 VDC when active. Connect the other side of the load to SVC.

[PO2] Programmable Output #2 (P2-6)
24 VDC output rated at 0.5 A maximum. Via programming, it can be used for AVC Error, Contactor Error, Step End, or End of Sequence (EOS) output. See Section 5.4 for more information. Not isolated via Internal Control Relay (CR1). Supplies 24 VDC when active. Connect the other side of the load to SVC.

[PO3] Programmable Output #3 (P2-7)
24 VDC output rated at 0.5 A maximum. Via programming, it can be used for Current Error, Any Error, Count End, or Water Saver output. See Section 5.4 for more information. Not isolated via Internal Control Relay (CR1). Supplies 24 VDC when active. Connect the other side of the load to SVC.

[PO4] Programmable Output #4 (P2-8)
24 VDC output rated at 0.5 A maximum. Via programming, it can be used for Step End, Current Error, AVC Error, or Interlock output. See Section 5.4 for more information. Not isolated via Internal Control Relay (CR1). Supplies 24 VDC when active. Connect the other side of the load to SVC.
4.3 Wiring for AC Option

PCB2 TS1

[SV1] AC Solenoid Valve #1 (PCB2-TS1-SV1)
Solenoid Valve 1 - AC output rated at 1 A maximum. Used for weld air valve 1. Supplies AC when active. Connect the other side of the load to SV2, SV4, SV6. Protected by Internal Control Relay 1 (CR1). VL1 is the source for this voltage.

[SV3] AC Solenoid Valve #2 (PCB2-TS1-SV3)
Solenoid Valve 2 - AC output rated at 1 A maximum. Used for weld air valve 2. Supplies AC when active. Connect the other side of the load to SV2, SV4, SV6. Protected by Internal Control Relay 1 (CR1). VL1 is the source for this voltage.

[SV5] AC Solenoid Valve #3 (PCB2-TS1-SV5)
Solenoid Valve 3 - AC output rated at 1 A maximum. Used for weld air valve 3. Supplies AC when active. Connect the other side of the load to SV2, SV4, SV6. Can be protected by Internal Control Relay 1 (CR1). Can **BYPASS** CR1 with the use of PCB2 TS7-B and TS7-R. VL1 is the source for this voltage.

AC return connection (solenoid valve common) - serves as a common point for SV1, SV3, and SV5. Internally connected to PCB2-TS1-VL2.

[VL1] Valve Power Line #1 (PCB2-TS1-VL1)
Typically an internally provided and connected AC power source ranging from 24 to 120 VAC to only provide power for AC valves (SV1, SV3, SV5).

[VL2] Valve Power Line #2 (PCB2-TS1-VL2)
Typically an internally provided and connected AC power source ranging from 24 to 120 VAC neutral (?) to only provide power for AC valves (SV1, SV3, SV5).
4.3 Wiring for AC Option

PCB2 TS4

[TIMER V3 OUT] Timer Valve 3 Output (PCB2-TS4-TIMER V3 OUT)

The 24V digital state of P2-4 on the timer module is supplied to this pin. Nothing other than the V3IN jumper should be connected here; if the connection is unused, then this output should not have a connection other than V3IN. See TS4-V3IN. With the jumper installed, SV5 will follow the state of Valve 3.

[V3IN] Valve 3 Control Input (PCB2-TS4-V3IN)

24V digital input used to control SV5. Normally connected to TS4-TIMER V3 OUT. When a jumper is connected from TS4-TIMER V3 OUT, the state of SV5 is controlled by the State of V3 and will mimic the Valve 3 24 SC DC output. When required (and V3 is not needed), the jumper between TS4-TIMER V3 OUT to TS4-V3IN can be removed. The TS4-V3IN SV5 input can then be connected to any of the four programmable output terminals (P2-5 through P2-8) to obtain an AC output that mimics the programming of the output selected.

AC wiring information continues on the next page.
### 4.3 Wiring for AC Option

#### PCB2 TS7

**[R] AC Solenoid Valve #3 Safety Relay (PCB2 TS7-R)**

The valve control relay (CR1) prevents valves SV1, SV3, and SV5 from activating without an initiation on either FS1 or FS2. **AC SAFETY RELAY** default connection to JW1. CR1 protection is applied to the SV5 output. See the warning below.

**[B] Bypass AC Solenoid Valve #3 Safety Relay (PCB2 TS7-B)**

**AC SAFETY RELAY** optional connection to JW1. CR1 protection is **BYPASSED** to SV5 output. See the warning below.

---

**!!! WARNING !!!**

Installing PCB2-TS7-JW1 to PCB2-TS7-B will **BYPASS** the Valve Control Relay (CR1), which normally prevents valve 3 activation until a weld sequence is initiated. Since this valve may now be activated without energizing the control relay, **care MUST be taken to ensure safe operation.** Please also see the warning below.

---

**!!! WARNING !!!**

This control complies with AWS J1.1:2013 requiring fail safe contacts in series with valve and weld outputs to prevent spurious outputs. Valve 3 (SV1 to SV5) has a jumper (JW1) that allows enabling (connected to R) or disabling (connected to B) the contacts from Control Relay 1 (CR1). This is to allow for programming features that are in the I/O Map when using PCB2-TS4. Thus, when PCB2-JW1 is in the BYPASS mode, PCB2-SV5-V3 can turn on independent of the status of the initiations FS1 and FS2. **Care MUST be taken to ensure safe operation.**
# 5.1 Keypad Functions

5.2.1 Status Screens—Status[1]

To get to Status[4]:

| ← or ↑ |

Main status screen.

To get to Status[2]:

| ↓ or → |
5.2.1 Status Screens—Status[2]

Error message(s). More info in Section 6.1.

Weld 1 current

Weld 2 current

Weld 1 conduction angle

Active schedule

Status screen #

Power factor delay

Weld 1 pulse width

Weld 2 pulse width

Weld 2 conduction angle

This screen displays the results of the last weld.

To get to Status[1]:

To get to Status[3]:
This screen displays the counts of the stepper and the counter, if they are enabled. If these features are disabled, this screen displays “Stepper=Off” and/or “Counter=Off” instead.
5.2.1 Status Screens—Status[4]

This screen displays the status of the control's inputs and outputs. HIGH signals are represented by a 1, and LOW signals are represented by a 0. Also displayed is the status of the AC line voltage/frequency.

To get to Status[3]:

To get to Status[1]:

Navigate to the ‘Use Schedule’ screen.

Schedule  [0-63]
Default = 0

This selects the active schedule to be run. To save changes to this parameter, the key must be pressed. If schedule select is set to ‘External’ on the Config menu, then changes cannot be made unless set to ‘Internal’.

NOTE: Navigation to the ‘Use Schedule’ screen can be done two different ways:

1. Starting from the Status screens, press . (See Menu Navigation for details.)

2. Starting from the Status screens, press and then select ‘Use Schedule’ from the Main Menu.
5.2.2 Main Menu Screens—Edit Schedule

Navigate to the ‘Edit Schedule’ screen.

Schedule Number  [0-63]
Default = 0

In order to accept changes made to any field, the [ENTER] button must be pressed. It is important to make sure that the correct schedule number is selected AND accepted BEFORE completing all of the corresponding settings to follow.

Squeeze Delay  [0-99] cycles
Default = 0

Additional time delay to be added to ‘Squeeze’. This is usually utilized when ‘Cycle Mode’ is set to repeat. The squeeze delay will only be applied to the first weld of the repeating cycle. Parameter is replaced by ‘Advance’ when ‘air-over-oil’ is enabled.

Squeeze  [0-99] cycles
Default = 0

Time delay between the signal to the programmed valve(s) and weld initiation. Parameter is replaced by ‘Intensify’ when ‘air-over-oil’ is enabled.

>Valve  [None/1/2/3/1+2/2+3/1+3/1+2+3]
Selection of valve(s) to be activated.

Weld 1  [0-99] cycles
Default = 0
Also referred to as “pre-heat”
5.2.2 Main Menu Screens—Edit Schedule

>Mode  [Phase Shift/Const Current]
Current regulation mode of Weld 1.
- Phase Shift—welding current is regulated
- Const Current—current is not regulated

>Heat  [0-99]%
Phase shift %. Does not apply when Current Mode is set to Const Current.

>Current  [0.00-100.00] kA
Weld current setting does not apply when Mode is set to Phase Shift.

>I1 Monitor  [On/Off]
Must be enabled in order to track/report current errors.

>>High  [0-99]%
Default = 0
% current above programmed value that will trigger an error. Only visible when ‘I1 Monitor’ configuration is on.

>>Low  [0-99]%
Default = 0
% current below programmed value that will trigger an error. Only visible when ‘I1 Monitor’ is on.

>>Pre-low  [0-99]%
Default = 0
% current below programmed value that will trigger ER44. Only visible when ‘I1 Monitor’ is on.
5.2.2 Main Menu Screens—Edit Schedule

>>Pre-low count [0-99] cycles
Default = 0
Number of ‘Weld 1’ cycles that must fall below the ‘Low’ limit in order to trigger an error. Only visible when ‘I1 Monitor’ configuration is on.

>PW1 Monitor [On/Off]
Must be enabled in order to track/report phase shift abnormalities.

>>High [0-99]%
Default = 0
Maximum phase shift the control can apply in order to achieve the ‘Current’ setting without triggering an error. Only visible when ‘PW1 Monitor’ configuration is on.

>>Low [0-99]%
Default = 0
Minimum phase shift the control can apply in order to achieve the ‘Current’ setting without triggering an error. Only visible when ‘PW1 Monitor’ configuration is on.

Cool 1 [0-99] cycles
Default = 0
Time delay between ‘Weld 1’ and ‘Weld 2’. Designed to give an impulse effect.
5.2.2 Main Menu Screens—Edit Schedule

Slope  [0-99] cycles
Default = 0
The number of additional cycles between ‘Weld 1’ and ‘Weld 2’ in order to transition between the two gradually. A larger ‘Weld 1’ will result in a downslope; whereas a larger ‘Weld 2’ will result in an upslope.

Weld 2  [0-99] cycles
Default = 0
Also known as “main heat”

>Mode  [Phase Shift/Const Current]
Current regulation mode of Weld 2.
- Phase Shift—welding current is not regulated
- Const Current—current is regulated

>Heat  [0-99]%
Phase shift %. Does not apply when Current Mode is set to Const Current.

>Current  [0.00-100.00] kA
Weld current setting does not apply when Mode is set to Phase Shift.

>I2 Monitor  [On/Off]
Must be enabled in order to track/report current errors.
5.2.2 Main Menu Screens—Edit Schedule

>>High [0-99]%
Default = 0
% current above programmed value that will trigger an error. Only visible when ‘I2 Monitor’ configuration is on.

>>Low [0-99]%
Default = 0
% current below programmed value that will trigger an error. Only visible when ‘I2 Monitor’ configuration is on.

>>Pre-low [0-99] %
Default = 0
% current below programmed value that will trigger ER46. Only visible when ‘I2 Monitor’ configuration is on.

>>Pre-low count [0-99] cycles
Default = 0
Number of ‘Weld 2’ cycles that must fall below the ‘Low’ limit in order to trigger an error. Only visible when ‘I2 Monitor’ is on.

>PW2 Monitor [On/Off]
Must be enabled in order to track/report phase shift abnormalities.

>>High [0-99]%
Default = 0
Maximum phase shift the control can apply in order to achieve the ‘Current’ setting without triggering an error. Only visible when “PW2 Monitor” is on.
>>Low  [0-99]%
Default = 0
Minimum phase shift the control can apply in order to achieve the ‘Current’ setting without triggering an error. Only visible when ‘PW2 Monitor’ configuration is

Cool 2  [0-99] cycles
Default = 0
Primarily used when applying multiple impulses; time delay following each ‘Weld 2’ impulse.

Hold  [0-99] cycles
Default = 0
Time delay during which the electrodes remain in contact with the part being welded to allow weld nugget to congeal.

Off  [0-99] cycles
Default = 0
Time delay following ‘Hold’ cycle in which the valve (s) release; the next schedule/sequence will not begin until the ‘Off’ cycle is complete.

Impulses  [1-99] cycles
Default = 1
Number of times to deliver Weld 2—Cool 2.
(Impulses do NOT apply to Weld 1—Cool 1.)
5.2.2 Main Menu Screens—Edit Schedule

**I offset [up to -15% through +15%]**

Adjustable increase or decrease to total current delivered by a sequence. This is one of the few adjustable parameters when control is locked. Only visible when 'Max I offset' is not "0". Range is dependent on what 'Max I offset' is set to in the Config menu.

**Change all [Yes/No]**
- **Yes**—'I offset' will be applied to all schedules
- **No**—'I offset' will only be applied to the current schedule

**Cycle Mode [Non-Repeat/Repeat/Chained/Successive/Wait Here]**
- **Non-Repeat**—Control can be initiated for only one sequence/schedule even if initiation remains close.
- **Repeat**—Sequences/schedules will continue if initiation remains closed.
- **Chained**—Schedules are chained together so that consecutive schedules will be sequenced from one initiation.
- **Successive**—Schedules are chained together so that consecutive schedules will be sequenced from separate initiations.
- **Wait Here**—Only applies when certain parameters (Presqueeze, Squeeze, Weld 1, Cool 1, Weld 2, Cool 2, or Hold) are set to 99 cycles. This allows infinite Weld 2 duration until Escape is triggered. 'Beat Mode' configuration is authorized to 'Wait Here' if this Cycle mode is desired.
Advance  [0-99] cycles
Default = 0
Time delay to allow advancement of the cylinder using oil pressure only. Only visible when 'air-over-oil' configuration (Mode1 or Mode2) is selected. Otherwise, parameter is replaced by Squeeze Delay.

Intensify  [0-99] cycles
Default = 0
Time delay to allow force buildup of the cylinder using air pressure. Only visible when 'air-over-oil' configuration (Mode1 or Mode2) is selected. Otherwise, parameter is replaced by Squeeze.

Block Delay  [0-99] cycles
Default = 0
Timed delay to allow high force of the cylinder to release air pressure after the welding process. Only visible when 'air-over-oil' configuration (Mode2 only) is selected.
5.2.2 Main Menu Screens—Copy Schedule

Navigate to the ‘Copy schedule’ screen.

![Copy Schedule Screen]

**Copy From** [0-63]

# of the schedule to be copied.

**Copy To** [0-63]

# of the schedule to be replaced.

**Confirm** [Yes/No]

Must select ‘Yes’ and press the key to complete the above copy/replace. ‘DONE!!!’ will appear in the title bar once complete.
5.2.2 Main Menu Screens—Reset Error

Navigate to the ‘Reset error’ screen.

Confirm [Yes/No]

Must select ‘Yes’ and press the key to complete the above copy/replace. ‘DONE!!!’ will appear in the title bar once complete.
5.2.2 Main Menu Screens—Edit Counter

Navigate to the ‘Edit counter’ screen.

Counter  [Enable/Disable]

- **Enable**—‘Weld count done’ will increment with each weld delivered. Error ‘ER25’ will be reported when ‘Max part count’=‘Part count done’.

Max part count  [0-60,000]
Default = 60,000
Number at which the ‘part count done’ reports ‘ER25’.

Weld per part  [1-9,999]
Default = 1
The number of welds to increment ‘part count done’ by one.

RST Counter  [None/PCTR/WCTR/Both]
Resets counter.
- **PCTR**—part counter
- **WCTR**—weld-per-part counter
Navigate to the ‘About’ screen.

This screen displays firmware and hardware information. The information on this screen cannot be changed using the keypad. For more information on updating firmware, see Section 5.2.4.
Navigate to the ‘Config’ screen. (See Menu Navigation for details.)

**Weld Mode**  [Spot/Seam1/Seam2]

- **Spot**—Standard squeeze, weld, hold, and off sequence.
- **Seam1**—When FS1 or FS2 input is toggled, control will run ‘schedule’ from ‘Squeeze Delay’ through ‘Cool 2’. If FS1 or FS2 input is held, control will repeat ‘Weld 2’ and ‘Cool 2’.
- **Seam2**—FS1 initiation implements same function as in Seam1. FS2 and schedule 20 will always initiate ‘Spot’ Weld Mode.

**Retraction**  [Off/Maintained/Momentary]

- **Maintained**—Retraction output directly reflects retraction input.
- **Momentary**—Retraction output changes state with a toggled impulse to the retraction input.

This parameter is ignored if ‘Beat Mode’ is enabled.

**On Error**  [Continue/Head Lock/Stop]

- **Continue**—Further welds are permitted regardless of previous weld status.
- **Head Lock**—When a major error occurs, valve signal(s) are held on. An Escape input is required to release the valve output(s). Additional welds are not permitted until Error Reset occurs.
- **Stop**—On error, valve signal(s) turn off as normal. Additional welds are not permitted until Error Reset occurs.
5.2.3 Setup Menu Screens—Config

Sch Select  [Internal/External]

- **Internal**—FS1 will initiate the programmed weld schedule number.
- **External**—FS1 will initiate the weld schedule number according to the binary value represented by PI3, PI4, PI5, and PI6.

(FS2 will always initiate weld schedule 20.)

I-Feedback  [Primary/Secondary/No Coil]

This setting should correspond to the physical location of the sensing coil.

Air-over-oil  [Off/Mode 1/Mode 2]

- **Mode 1**—air-over-oil setting without retraction
- **Mode 2**—air-over-oil setting with retraction enabled using ‘Retract Open’ and ‘Retract Close’ settings.

Retract Open  [0-99] cycles

Default = 0

Time delay to allow for retraction from ‘pre-weld’ position to ‘fully open’ position. Only appears when ‘air-over-oil’ is set to ‘Mode 2’.

Retract Close  [0-99] cycles

Default = 0

Time delay to allow for closure from ‘fully open’ position to ‘pre-weld’ position. Only appears when ‘air-over-oil’ is set to ‘Mode 2’.
5.2.3 Setup Menu Screens—Config

Beat Mode  [Off/Squeeze/Sqz. + Weld/Wait Here]

- **Off**—Sequence/schedule will complete with a momentary activation of FS1 or FS2.
- **Squeeze**—Sequence/schedule requires continuous activation of FS1 or FS2 until the squeeze sequence is complete, otherwise the sequence will terminate.
- **Sqz. + Weld**—Welding sequence requires continuous activation of FS1 or FS2 until the weld sequence is complete, otherwise the sequence will terminate.
- **Wait Here**—Welding sequence requires continuous activation of FS1 or FS2 until the weld sequence is complete, otherwise the sequence will temporarily pause (retraction will occur). This setting requires the active schedule’s ‘Cycle Mode’ to also be set to ‘Wait Here’.

AVC  [Disabled/Max [1-10] %]

Automatic Voltage Compensation—defines how far off the AC line voltage can be from the programmed AVC nom. value before ER32 is displayed. Only operates if enabled.

AVC nom.  [187-633] Volts

Default = 480

Supply voltage on which the control is designed to operate. Parameter is only visible when ‘AVC’ is enabled.
5.2.3 Setup Menu Screens—Config

Voltage monitor  [On/Off]
- **On**—High and Low voltage errors are enabled using the following parameters.

**>High  [160-690] volts**
Default = 690
Error ‘ER23’ will be triggered if supply voltage is above the set value. Parameter is only visible when “Voltage monitor’ is on.

**>Low  [160-690] volts**
Default = 160
Error ‘ER24’ will be triggered if supply voltage is below the set value. Parameter is only visible when ‘Voltage monitor’ is on.

**Max I offset  [0-15] %**
Determines the input range for ‘I offset’ parameter. For example, if ‘Max I offset’ is 6%, ‘I offset’ input range is –6% to +6%.

**Water saver  [0-199] sec**
Default = 0
Time duration that the water flow signal will remain on following a weld. Feature available on PO3.

**87° delay  [On/Off]**
- **On**—the first half cycle is delayed 87 degrees (51.6% max) phase shift in order to minimize saturation of the weld transformer.
5.2.3 Setup Menu Screens—Config

Half Cycle  [Off/+/-/AC]
- ‘+’—Only the positive half cycle is output.
- ‘-’—Only the negative half cycle is output.
- AC—Alternating positive/negative half cycles are output.

Power factor  [0-99]%
Default = 75%
- ‘0’—‘Automatic Power Factor’ mode.
- ‘1-99’—Manual power factor delay. Value must be determined by the Power Factor Delay and will vary for each machine.

Blanking  [0-99] cycles
Default = 0
The number of weld cycles to exclude from measurement and limit testing.

Display return  [0-10] min
Default = 0
- ‘0’—Disabled
Length of time before the display returns to ‘Status Page 1’.

Clear  [None/IO Map/Calibration/Config/Stepper/Counter/Schedule/All]
Clearing data from this menu does not require a confirmation. ‘DONE!!!’ will appear in the title bar as verification.
5.2.3 Setup Menu Screens—Calibration

Navigate to the ‘Calibration’ screen.

<table>
<thead>
<tr>
<th>Calibration</th>
</tr>
</thead>
<tbody>
<tr>
<td>Toroid: 150 mV/kA</td>
</tr>
<tr>
<td>Max I: 20 kA</td>
</tr>
<tr>
<td>AC line scale: 1.00</td>
</tr>
<tr>
<td>Turns ratio: 50:1</td>
</tr>
</tbody>
</table>

**Toroid (Primary Sensing)** [1260-1540] mV/kA

Default = 1500

For accurate current monitoring.

**Toroid (Secondary Sensing)** [135-165] mV/kA

Default = 150

For accurate current monitoring.

**Max I** [6-100] kA

Default = 20

**AC line scale** [0.8-1.2]

Default = 1.0

For accurate voltage monitoring.

**Turns ratio** [10-255]

Default = 50

Turns ratio of welding transformer
Navigate to the ‘I/O Map’ screen.

This screen allows you to set the function of each input and output. For more information, see Section 5.4.

This screen allows for the input source of each programmable input to be changed. The options are local (default) and remote.
5.2.3 Setup Menu Screens—Error Map

Navigate to the ‘Error Map’ Screen.

This screen allows you to set each error message as ‘Major’ or ‘Minor’. All messages are set to Minor by default. For more detailed information on each error message, see Section 6.1.
5.2.3 Setup Menu Screens—Stepper

Navigate to the ‘Stepper’ screen.

**Stepper [Disable/Heat]**
- **Heat**—Stepper function enabled with current compensation.

**Tip dress [0-9,999]**
Default = 9,000
When ‘Count Done’ = ‘Tip dress’, ER31 will trigger.

**RST Stepper [No/Yes]**
Selecting ‘Yes’ and pressing the ENTER key will reset the ‘Count Done’ to zero.
Navigate to the ‘Utility’ screen.

This screen contains the Utility menu. For more detailed information on backing up and restoring data, please see Section 5.2.4.
5.2.3 Setup Menu Screens—Ethernet

Navigate to the ‘Ethernet’ Screen.

This screen displays information related to Ethernet communication with the control, including the control’s IP address. The information on this screen can be changed using the keypad.
5.2.4 Other Menus—Saving Schedules

Step 1: Insert a formatted USB drive into the USB port on the control panel

Step 2: From the ‘Setup Menu’ (see Section 5.2 for more information on navigating menus) select ‘Utility’

Step 3: Select ‘Backup Data’

Step 4: Rename file using + and −

Step 5: Set ‘Confirm’ to “YES” using + and −

Step 6: Press and verify that ‘DONE!!!’ appears in the top left corner of the title bar
5.2.4 Other Menus—Loading Schedules

Step 1: Insert a USB drive with a previously saved backup file* into the USB port on the control panel.

Step 2: From the ‘Setup Menu’ (see Section 5.2 for more information on navigating menus) select ‘Utility’.

Step 3: Select ‘Restore Data’.

Step 4: Select the desired filename* using + and -.

Step 5: Set ‘Confirm’ to “YES” using + and -.

Step 6: Press and verify that ‘DONE!!!’ appears in the top left corner of the title bar.

*Note: The backup file must be on the root directory of the USB drive. And the filename must be EN600100.EN6 to EN600199.EN6.
5.2.4 Other Menus—Update Firmware

Step 1: Ensure the control is completely powered down.
Step 2: Insert a USB drive with EN6001 firmware into the USB power on the control panel.
Step 3: Press and hold + and -
Step 4: Power on the control. Once the Bootloader Menu appears, release + and -
Step 5: Select ‘Refresh firmware’
Step 6: Select the desired filename* using + and -
Step 7: Set ‘Confirm’ to “YES” using + and -
Step 8: Press and , the control will begin updating
Step 9: In order to return to the ‘Main Menu’ either
1. Temporarily power down the control
OR
2. Go back to ‘Bootloader Menu’ by pressing ESC
   Then, select ‘Execute firmware’ and select ‘YES’

*Note: The firmware file must be on the root directory of the USB drive, and the filename will be E0611001.BIN to E0619999.BIN
   (this may requiring the extraction of a zip file)
5.3 Timing Cycles
(traditional spot weld)

The diagram above is intended to demonstrate a resulting welding timing cycle using the attached parameters; it is not recommended as part of a functional weld schedule.

</tbody>
</table>
5.4 I/O Programming

Programmable Inputs

[2nd Stage] Second Stage
When initiated (1st Stage), the schedule will start and not continue onto weld until the programmable input 2nd Stage is connected to FSC.

[Back Step] Back Step
When in a successive schedule, a momentary connection to FSC input will decrement the active schedule by 1. If the same closure to FSC is held for 1 second or longer, a sequence composed of multiple successive schedules can be returned to its start.

[Edit Lock] Edit Lock
A maintained closure to FSC input prevents parameter changes to the weld schedules as well as the configuration menu. Only the weld heat can be adjusted.

[Error Reset] Error Reset
A connection to FSC will externally clear an error.

[Escape] Escape
This input is used for two different functions:
1. When On Error is programmed to HEADLOCK in the Config Menu, the valve outputs will not change until a momentary connection to FSC is received.
2. When Beat Mode and Cycle Mode are both programmed to WAIT HERE and a timing cycle parameter is set to 99 cycles, the parameter essentially functions as an infinite duration. A momentary connection to FSC instructs the control to break the infinite loop and continue with the next portion of the timing cycle sequence.

[Interlock] Interlock
When initiated, the schedule will start and not continue on to weld until the programmable input Interlock is connected to FSC. If too long passes before this input is connected, then the control will display ER16 (see Section 6.1 for more information). This input must be used in conjunction with the Interlock output.

[PCTR] Part Counter Reset
A momentary connection to FSC will reset the Part Count to zero.

[PS1] Pressure Switch
When initiated, the schedule will start and not continue on to weld until the programmable input PS1 is connected to FSC. If too long passes before this input is connected, then the control will display ER12 (see Section 6.1 for more information).
5.4 I/O Programming

[Retraction] Retraction
Retraction configuration requires that the Retraction input and the Retraction output are both enabled. This also requires that the Retraction parameter in the Config Menu be set to either MOMENTARY or MAINTAINED. When set to MOMENTARY, a momentary connection to FSC will toggle the Retraction output state. When set to MAINTAINED, maintained closure to FSC will result in an ACTIVE Retraction output. If the control is instructed to weld when the Retraction output is not ACTIVE, ER61 will be displayed (see Section 6.1 for more information.)

[Sch. Select 1] - [Sch. Select 8] Binary Schedule Select Value
A connection to FSC denotes that value should be added to the total value of the four potential schedule select inputs in determining which schedule is the active schedule for FS1. This function also requires that the Schedule Select parameter in the Config Menu be set to EXTERNAL.

Example: If all Schedule Select inputs are connected to FSC, then the active schedule will be \(1 + 2 + 4 + 8 = 15\). If Sch. Select 1 and Sch. Select 4 are both connected to FSC, then the active schedule will be \(1 + 4 = 5\).

[Stepper Reset] Stepper Reset
A momentary connection to FSC will reset the Stepper Count value to zero.

[WCTR] Weld Counter Reset
A momentary connection to FSC will reset the Weld Count value to zero.

I/O programming information continues on the next page.
Programmable Outputs

[Any Error] Any Error
A 24 VDC output occurs between the selected Programmable Output and SVC when any error code is displayed.

[AVC Error] Automatic Voltage Compensation Error
A 24 VDC output occurs between the selected Programmable Output and SVC when ER32 is displayed (see Section 6.1 for more information).

[Contactor Error] Contactor Error
A 24 VDC output occurs between the selected Programmable Output and SVC when ER13 is displayed (see Section 6.1 for more information).

[Count End] Part Counter End
A 24 VDC output occurs between the selected Programmable Output and SVC when ER25 is displayed (see Section 6.1 for more information).

[Current Error] Current Error
A 24 VDC output occurs between the selected Programmable Output and SVC when ER19, ER20, ER21, or ER22 is displayed (see Section 6.1 for more information).

[EOS] End of Sequence
A momentary 24 VDC output occurs between the selected Programmable Output and SVC when either an unchained schedule or the final schedule of a chained/successive sequence is complete.

[Force Error] Force Error
A 24 VDC output occurs between the selected Programmable Output and SVC when ER60 is displayed (see Section 6.1 for more information).

[Interlock] Interlock
A 24 VDC output occurs between the selected Programmable Output and SVC when ER64 is displayed (see Section 6.1 for more information). This output must be used in conjunction with the Interlock input.

[Major Error] Major Error
A 24 VDC output occurs between the selected Programmable Output and SVC when an error that is programmed to MAJOR in the Error Map is displayed (see Error Map in Section 5.2.3).
5.4 I/O Programming

[Retraction] Retraction
A 24 VDC output occurs between the selected Programmable Output and SVC when the Retraction input is connected to FSC either momentarily (Retraction set to MOMENTARY in the Config Menu) or continuously (Retraction set to MAINTAINED in the Config Menu). Must be used in conjunction with Retraction input. This output must be active for welding to proceed.

[Step End] Step End
A 24 VDC output occurs between the selected Programmable Output and SVC when the stepper function is enabled and the step count has reached the programmed value for the particular step.

A 24 VDC output occurs between the selected Programmable Output and SVC for as long as is programmed for Water Saver in the Config Menu after input to FS1 or FS2 has been removed.
# 6.1 Error Codes

Note: All error defaults are set to “Minor error”. Error handling should be set under the configurations menu and by utilizing the “Any Error”, “Contactor Error”, and “Major Error” options available for the programmable outputs in the I/O Map.

</tbody>
</table>
6.1 Error Codes

<table>
<thead>
<tr>
<th>ERROR CODE</th>
<th>Description</th>
</tr>
</thead>
</table>
| 16         | Interlock Error  
Control has timed out waiting for Interlock input. If this feature is unused, program ‘P12’ and/or ‘P14’ to another option or insert a jumper from ‘P1-7’ and/or ‘P1-9’ to ‘P1-12’. If the feature is being utilized, verify that the external weld interlock is functioning appropriately. |
| 19         | High Current 1  
The control measured a higher current for Weld1 than the programmed upper limit. Verify that the impedances are normal and/or consider changing the programmed value under the ‘Edit Schedule’ menu. |
| 20         | Low Current 1   
The control measured a lower current for Weld1 than the programmed lower limit. Verify that the impedances are normal and/or consider changing the programmed value under the ‘Edit Schedule’ menu. |
| 21         | High Current 2  
The control measured a higher current for Weld2 than the programmed upper limit. Verify that the impedances are normal and/or consider changing the programmed value under the ‘Edit Schedule’ menu. |
| 22         | Low Current 2   
The control measured a lower current for Weld2 than the programmed lower limit. Verify that the impedances are normal and/or consider changing the programmed value under the ‘Edit Schedule’ menu. |
| 23         | High Voltage    
The AC line voltage is measured above the programmed upper limit under the “voltage monitor” parameter. Check the AC line voltage and/or adjust the parameter under the ‘Config’ menu. |
| 24         | Low Voltage     
The AC line voltage is measured below the programmed lower limit under the “voltage monitor” parameter. Check the AC line voltage and/or adjust the parameter under the ‘Config’ menu. |
| 25         | Counter end     
Reset the counter. If this feature is not being utilized, consider disabling it under the ‘Edit Counter’ menu. |
| 26         | Stepper end     
Reset Stepper. If this feature is not being utilized, consider disabling it under the ‘Stepper’ menu. |
| 27         | High Pulse Width1  
The pulse width for Weld 1 was above the programmed upper limit. Check transformer or secondary circuit to ensure that current is not shunting and/or adjust parameter under the ‘Edit Schedule’ menu. |
| 28         | Low Pulse Width1 
The pulse width for Weld 1 was below the programmed lower limit. Check transformer or secondary circuit and/or adjust parameter under the ‘Edit Schedule’ menu. |
| 29         | High Pulse Width2  
The pulse width for Weld 2 was above the programmed upper limit. Check transformer or secondary circuit to ensure that current is not shunting and/or adjust parameter under the ‘Edit Schedule’ menu. |
| 30         | Low Pulse Width2 
The pulse width for Weld 2 was below the programmed lower limit. Check transformer or secondary circuit and/or adjust parameter under the ‘Edit Schedule’ menu. |

**6.2 Warranty and Service Policy**

**Warranty:**

ENTRON warrants that any equipment manufactured by it for the Purchaser (the “Product”) will be free from defects in materials and workmanship and will comply with ENTRON’s quoted specification and/or schematic design for the Product (the “Designed Use”). ENTRON further warrants that, if properly and normally used and maintained, the Product will be free of defects for the Warranty Period. The Warranty Period shall run from the date of original purchase of the Product to the earlier of (i) eighteen (18) months after the date of shipment from the ENTRON site or (ii) twelve (12) months after the Product is placed in service, whichever occurs first (the “Warranty Period”). The Warranty Period applies unless superseded by a different term that is expressly accepted by ENTRON in writing in ENTRON’s order acknowledgement document. During the Warranty Period, ENTRON will remedy any such defects and will remedy any non-compliance with the quoted specification and/or schematic design by repair or replacement (at ENTRON’s option) of the Product or parts to the Product.

**Terms and Conditions of Warranty:**

The warranty shall be limited to the warranty of materials and workmanship and compliance with ENTRON’s Designed Use for the Product and ENTRON makes no other warranties. When the Product is sold to be used in combination with other equipment not of ENTRON’s design or manufacture, the warranty is limited to the Product and not the other equipment.

EXCEPT FOR THE WARRANTY SET FORTH ABOVE IN THE FIRST PARAGRAPH, (A) NEITHER ENTRON NOR ANY PERSON ON ENTRON’S BEHALF HAS MADE OR MAKES ANY EXPRESS OR IMPLIED REPRESENTATION OR WARRANTY WHATSOEVER, EITHER ORAL OR WRITTEN, INCLUDING ANY WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, TITLE, OR NON-INFRINGEMENT OR PERFORMANCE OF PRODUCTS OR PRODUCTS TO STANDARDS SPECIFIC TO THE COUNTRY OF IMPORT, WHETHER ARISING BY LAW, COURSE OF DEALING, COURSE OF PERFORMANCE, USAGE OF TRADE OR OTHERWISE, ALL OF WHICH ARE EXPRESSLY DISCLAIMED, AND (B) THE PURCHASER ACKNOWLEDGES THAT IT HAS NOT RELIED UPON ANY REPRESENTATION OR WARRANTY MADE BY ENTRON, OR ANY OTHER PERSON ON ENTRON’S BEHALF, EXCEPT AS SPECIFICALLY PROVIDED IN THE FIRST PARAGRAPH.

This warranty does not apply to any Product that (i) has been subjected to abuse, misuse, neglect, negligence, accident, improper testing, improper installation, improper storage, improper handling, abnormal physical stress, abnormal environmental conditions or use contrary to any instructions issued by ENTRON; (ii) has been reconstructed, repaired or altered by persons other than ENTRON or its authorized representative; (iii) has been used or integrated into any machine or equipment for any use other than a Designed Use; or (iv) has been used with any third-party products, hardware or product that has not been previously approved in writing by ENTRON.

For replacement parts supplied by ENTRON, the Warranty Period for said replacement parts is limited to the Warranty Period for the original Product in which said replacement parts are installed.

With respect to any of the equipment used within the Product, but not manufactured by ENTRON, ENTRON will transmit to the Purchaser the benefit of any warranties or conditions it receives from the manufacturer or supplier of said equipment which are capable of transmission. ENTRON itself gives no warranty hereunder in respect of any such equipment.

To obtain repairs or replacement parts under this warranty, the defective part must be returned, prepaid, to any ENTRON site (Mexico, United Kingdom or United States) prior to the end of the Warranty Period. Please send your repair to the attention of “Service” with a description of the problem you are experiencing, contact person and phone number.
6.2 Warranty and Service Policy

Limitations of the Warranty:
The damages for which ENTRON is liable in respect of any one cause of action shall not exceed the sum
equal to 100% of the purchase price specified in the equipment purchase agreement.

OTHER THAN ACTUAL DAMAGES AS LIMITED BY THE PRIOR PARAGRAPH, IN NO EVENT SHALL EN-
TRON OR ITS REPRESENTATIVES BE LIABLE FOR CONSEQUENTIAL, INDIRECT, INCIDENTAL, SPE-
CIAL, EXEMPLARY, PUNITIVE OR ENHANCED DAMAGES, LOST PROFITS OR REVENUES OR DIMINU-
TION IN VALUE, ARISING OUT OF OR RELATING TO ANY CLAIMS RELATED TO THE PRODUCT, RE-
GARDLESS OF (A) WHETHER SUCH DAMAGES WERE FORESEEABLE, (B) WHETHER OR NOT PUR-
CHASER WAS ADVISED OF THE POSSIBILITY OF SUCH DAMAGES AND (C) THE LEGAL OR EQUITA-
BLE THEORY (CONTRACT, TORT OR OTHERWISE) UPON WHICH THE CLAIM IS BASED, AND NOT-
WITHSTANDING THE FAILURE OF ANY AGREED OR OTHER REMEDY OF ITS ESSENTIAL PURPOSE.
WITHOUT LIMITING THE GENERALITY OF THE FOREGOING, THE PURCHASER ASSUMES ALL RISK
AND LIABILITY FOR THE RESULTS OBTAINED BY THE USE OF ANY PRODUCTS IN THE PRACTICE OF
ANY PROCESS, WHETHER IN TERMS OF OPERATING COSTS, GENERAL EFFECTIVENESS, SUC-
CESS OR FAILURE, AND REGARDLESS OF ANY ORAL OR WRITTEN STATEMENTS MADE BY EN-
TRON OR ITS AUTHORIZED REPRESENTATIVE, BY WAY OF TECHNICAL ADVICE OR OTHERWISE,
RELATED TO THE USE OF THE PRODUCT.

Warranty and Transferability of Software:
All software and/or software documentation (collectively, the “Software”), whether supplied to the Purchaser
as a component of the Product or supplied as a stand-alone Product, shall be considered to be "licensed" ra-
ther than “sold” to the Purchaser, and the Purchaser shall be licensed to use the Software under the following
terms unless superseded by a different term that is expressly accepted by ENTRON in writing in ENTRON’s
order acknowledgement document.

ENTRON or ENTRON’s licensor retains ownership of the Software and applicable copyrights, patents and
trade secrets.

- The Purchaser, as licensee, is granted a limited, non-exclusive, royalty-free license to use the
  Software during the term permitted by ENTRON in writing (and perpetually for any Software em-
  bedded into the Product).
- The Purchaser may not reverse engineer or modify the Software (except to customize the Product
  for the Purchaser’s operations, as authorized by ENTRON in writing, provided that any such modi-
  fications are and shall remain the property of ENTRON), remove it from the Product, or install the
  Software into products other than the Product.
- The Purchaser may not sublicense the Software, and this license terminates upon transfer of the
  Product to any third party.

All rights in the Software not expressly granted hereunder are reserved to ENTRON. The rights granted here-
in may be terminated by ENTRON upon prior written notice to the Purchaser if the Purchaser is in default of
these standard terms.
